

This hot tank stripper compound removes heavy grease, oil, sludge, rust, paint and scale from ferrous metal parts, such as engine blocks, cylinder heads, crankshafts, oil pans, etc. made of steel, iron, stainless and other ferrous metals. Do not use in contact with aluminum, zinc galvanizing, copper, brass, bronze, tin or magnesium. Do not use in contact with painted surfaces unless paint removal is desired.

DIRECTIONS:

Use 1/2 to 1 pound per gallon of water. To charge the tank, add the stripper powder slowly to cold water to avoid spattering and boil-over. Do not add to hot water. Maintain the strength of the solution by periodic additions of hot tank compound.

For optimum cleaning, the tank solution should be heated to a minimum of 180°F. For heavy cleaning, the temperature should be used to at least 210°F. With the proper conditions of temperature and solution strength, cleaning time will vary from 15 minutes up to one hour or more. Cleaning will be faster in agitated tanks and fresh solutions.

Freshly cleaned parts should be thoroughly flushed with water and dried with compressed air (or wiped down) to prevent flash rusting.

HOT TANK STRIPPER

**HEAVY DUTY ALKALINE
STRIPPER AND CLEANER**

**REMOVES RUST, SCALE, GREASE
AND PAINT FROM METALS**

**DISSOLVES QUICKLY
AND COMPLETELY**

DANGER  POISON

**HARMFUL OR FATAL IF SWALLOWED.
CAUSES SEVERE BURNS.**

See side panel for further cautions
and first aid instructions.
